

FAQ: NASA SBIR Technology Infusion and Post Phase II Opportunities

Carol R. Lewis
JPL SBIR Technology Infusion Manager
December 2015

Overview

- Introduction
- Technology Infusion
- Sources of Additional Support
- Sources of Information
- Program Contacts

Introduction

- This is an FAQ-type overview of NASA SBIR technology infusion (transition from Phase II into applications) and some options/strategies that are available for pursuing post Phase II funding.
- Blue pages: Introductory material on infusion.

 Particularly useful if you're new to SBIR. If you're an SBIR veteran, you may still want to scan it for updates.
- Green pages: Specific material if you're familiar with SBIR. You are encouraged to also share this information with your small business contacts.
- Orange pages: Commercialization materials and references – Of primary interest to companies – You are encouraged to share this information with your small business contacts.

How does NASA define infusion success?

- SBIR infusion success is measured in several ways.
 - Technology directly picked up by a flight project,
 mission or instrument This is the ultimate prize, but not the only one.
 - Technology targeted for further specific development, under an advanced technology program which a flight project, mission or instrument supports.
 - Technology significantly benefits direction of overall portfolio.
 - Small business either (a) sells their technology to a larger company, or (b) is bought out by a larger company, which in turn incorporates the technology into one of their product lines and/or uses it on a flight program.

What are typical technology infusion mechanisms?

Funded Infusion Mechanisms

- Direct funding of SBIR company via Phase III contract with a NASA Project.
- Direct funding from NASA to SBIR company that happens not to be via a Phase III Contract (i.e. could be the result of an additional competition, or a unit purchase order, or some other means of funding).
- Subcontract or similar indirect NASA funding to SBIR company through a third party (e. g. a prime contractor) working for a NASA project.

Unfunded Infusion Mechanisms

- Technology Use (e. g. an instrument or software is used by a project or lab).
- Use of the concept technology in trade study or proposal.

Success Story Example: NASA SBIR Contributions to the Mars Science Laboratory

Grammatech - Software for eliminating defects in mission-critical and embedded software applications directing rover operations

Starsys Research - Planetary gearboxes for the articulated robotic arm and the descent braking mechanism for controlling rate of descent to planetary surface

Creare - A space-qualified vacuum pump for the Sample Analysis at Mars (SAM) instrument package

The Mars Science Laboratory Curiosity Begins its Scientific Investigation on Mars Surface

Yardney Technical Products – Lithium ion batteries that enable the power system to meet peak power demands or rover activities

Honeybee Robotics – Dust removal tool used to remove the dust layer from rock surfaces and to clean the rover's observation tray and designed the sample manipulation system for the Sample Analysis at Mars (SAM) instrument package

inXitu— Features of their automated sample handling system are implemented in the Chemistry and Mineralogy experiment (CheMin) instrument

(1/3) What's working in technology infusion?

- Focus on technologies that have clear economic and/or risk reduction impact.
 - e. g. Significant savings in design time/effort, mass, volume, power, integration complexity/costs, etc.
- Focus on technologies with horizontal scope (more than one potential application, or class of applications) so they do not become obsolete if a specific application is redirected or dries up.
- Emphasize technical areas where other NASA funding sources are lacking.
- Publicize upcoming SBIR solicitation at relevant technical and programmatic meetings and conferences. Includes engineering staff and project/mission people encouraging their small business contacts to propose.
- **Publicize SBIR successes**, so that program and project managers can see concrete examples of the benefits.

(2/3) What's working in technology infusion?

- Technical Monitors and CORs who:
 - Make the small business aware of NASA technology requirements (and changes to these requirements) and effectively "champion" the technology to NASA programs and projects.
 - Communicate consistently with the small business and help it stay on track towards NASA applications.
 - Have solid connections to relevant missions, projects, and/or advanced technology programs.
 - Have specialized knowledge of how the relevant technology dovetails with NASA-specific mission needs.
 - Encourage the small business to take a proactive role in finding post Phase II funding and customers (see next page).

(3/3) What's working in technology infusion?

- Company has realistically assessed prospective NASA applications, including specific projects, instruments or advanced technology programs - and confirmed these interests via direct communication and contacts (not just via reading documents or websites).
- Company is proactive has a realistic, clearly defined plan

 preferably a written plan and mechanism to proceed
 beyond Phase II, either via their internal funding, seeking non-SBIR NASA funds, angel investors, venture capital, teaming with a prime or other larger organization, or a combination.

What are some Phase II strategies to increase the odds of follow-on work?

- Tech Monitors, CORs, and Subtopic Managers are among our most valuable resources to help company technologies get infused. You provide technical/programmatic credibility and connections with program and project personnel.
- Technology Infusion Manager (TIM) works connections with Center technologists, helps plan and implement infusion strategies, helps identify applications and funding sources, reports successes, keeps prospective users informed of relevant available and developing technologies, keeps SBIR advocates motivated.
- Integrate SBIR technologies with larger NASA technology development programs as much as possible. In Phase II, for a few hr/wk or hr/mo of your time, you receive, in return, several hundred \$K/yr worth of the company's technology development.
- Keep your line and program management aware about your company's SBIR successes and how their work is directly benefiting NASA.
- Focus on companies that are proactive in pursuing NASA applications, post Phase II funding, connections with primes, and commercial applications.

How are YOU essential to SBIR Technology Infusion?

- Each of the NASA Centers, including JPL, has an SBIR TIM. (A few Centers have more than one).
 - The TIM plans and implements their Center's overall strategy for infusing SBIR-developed technologies. Mostly via NASA SBIRs managed by their Center; but can include applicable SBIR technologies managed by other Centers or developed via other agencies, particularly DoD.
- The TIM relies heavily upon a broad network of contacts (YOU) who are active in working SBIR technology infusion.

How does the Reauthorization address infusion and commercialization?

- On 12/31/2011, the Federal SBIR Program was reauthorized long-term (through 9/30/2017) as part of the National Defense Authorization Act for FY 2012, H.R.1540; Public Law No. 112-81.
- Full text: at Library of Congress website, http://thomas.loc.gov/home/thomas.php
 - Under Advanced Search, go to 112th Congress and search for Bill Number H.R.1540
 - Click on "Text of Legislation".
 - Select the most recent version [H.R.1540.ENR] to download a PDF.
 - In the PDF, navigate to Division E SBIR and STTR Reauthorization.
 - Subtitle B Outreach and Commercialization Initiatives

Why are the SBIR and STTR Policy Directives important to infusion and commercialization?

- Per the Reauthorization, Subtitle D: The U. S. Small Business
 Administration (SBA) had 180 days to implement amended SBIR and
 STTR Policy Directives in accordance with the reauthorization
 legislation.
- Federal agencies participating in SBIR/STTR must follow the guidance provided by the Policy Directives.
- The Reauthorization bill included many program changes and additions.
 - A number of these are potential new tools for commercialization and infusion. Some apply only to certain agencies. Some items are mandatory, others are optional. The Policy Directives spell these out.
 - The amended Policy Directives were originally published in the Federal Register on 8/6/2012. Latest versions, dated 2/24/2014, are available at:

https://www.sbir.gov/about/about-sbir#sbir-policy-directive (SBIR) https://www.sbir.gov/about/about-sttr#sttr-policy-directive (STTR)

How did the Reauthorization address commercialization readiness?

- SBIR Civilian Agencies (Sect. 5123) includes NASA.
 - Pilot program New. Up to 3 yr duration (per Sect. 5164).
 - Agency head may allocate up to 10% of SBIR/STTR budget for awards for technology development, testing, evaluation and commercialization assistance for Phase II technologies; or to support progress of SBIR/STTR R&D and commercialization to Phase III.
 - For highly promising technologies to substantially enhance Agency's mission.
 - Individual awards can be up to 3X the amount of Agency's Phase II individual awards.
- SBIR DoD Agencies (Sect. 5122)
 - Per the Small Business Act, Sect. 9(y): The Secretary of Defense and the Secretary of each military department is authorized to create and administer a "Commercialization Pilot Program" to accelerate the transition of technologies, products, and services developed under the SBIR Program to Phase III, including the acquisition process.
 - · Reauthorization converts this program from Pilot to Readiness.

Implementation choice and details were up to each Agency.

NASA's 2014 pilot became the Commercialization Readiness Program (CRP)

NASA SBIR Post Phase II Initiatives (through 2015 Phase II)

- Phase II-Enhancement (II-E) Option
 http://sbir.gsfc.nasa.gov/content/post-phase-ii-initiatives#Phase-II-E
 - Objective is to further encourage the advancement of innovations developed under Phase II via an option of R/R&D efforts underway on current Phase II contracts. Eligible firms shall secure an external investor to partner with and invest in enhancing their technology for further research, infusion, and/or commercialization. Under this option, NASA will match external investor funds with SBIR/STTR funds to extend an existing Phase II project for a minimum of 4 months to perform additional R/R&D.
- Phase II-Expanded (II-X) Option http://sbir.gsfc.nasa.gov/content/post-phase-ii-initiatives#Phase-II-x
 - Objective is to establish a strong and direct partnership between the NASA SBIR/STTR Program and other NASA projects undertaking the development of new technologies of innovations for future use. Under this option, innovations developed in Phase II are to be advanced via an extension of R/R&D efforts to the current Phase II contract.
- Commercialization Readiness Program (CRP)
 http://sbir.gsfc.nasa.gov/content/post-phase-ii-initiatives#CRP
- Detailed guidelines are available on these websites.

Post Phase II Initiatives (Starting 2016 Phase II)

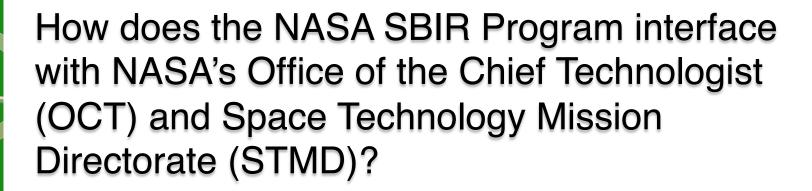

- Phase II-Extended (II-E) Option
 http://sbir.gsfc.nasa.gov/content/post-phase-ii-initiatives#Phase-II-E-2016-2
 - Objective is to further encourage the transition of SBIR/STTR technologies into NASA programs and missions; NASA acquisition programs, other Agency's programs, as well as the private sector.
 - Phase II-Extended is a combination of the older II-Enhancement and II-Expanded Initiatives.
 - Eligible firms shall secure a non-SBIR/STTR investor to contribute funding towards further enhancing the research to qualify for this option. Investor may be a non-SBIR/STTR NASA or NASA program; or may be an investor external to NASA, from another government agency or the private sector, depending on strategy being pursued for enhancing the technology for further research, infusion, and/or commercialization.
 - The NASA SBIR/STTR Program will match the investment funds with SBIR/ STTR funds, on a 1-for-1 basis, to extend an existing Phase II project for a minimum of 4 months to perform additional R/R&D.
 - Detailed guidelines are available on the website.

How does NASA post Phase II funding differ from that of other agencies?

- NASA's SBIR Program provides funds for Phase I (proof of concept), Phase II (demonstration/reduction to practice), the Phase II-E and II-X options (extension of Phase II that increases infusion probability) and the Commercialization Readiness Program (second Phase II's).
- Anything beyond that ---- needs to get its funds from elsewhere. Post Phase II funds can be NASA or non-NASA, but cannot be provided by SBIR/STTR.
- Several other SBIR agencies, particularly DoD, NSF and NIH; and especially the Navy, maintain a number of formal, funded post Phase II commercialization, business development, and infusion programs to which SBIR companies can apply.
- NASA has no direct analog of these large "umbrella" programs, so infusion into NASA programs and projects is more individualized.
 - Some of these strategies are being adopted by NASA, as has been done with Phase II-E and Phase II-X. The Reauthorization will accelerate this. However, most NASA infusion will continue to be on a case-by-case basis.

How does NASA make Phase III awards?

- NASA may award Phase III contracts for products or services with non-SBIR/STTR funds. An agency that wishes to fund a Phase III project is not required to conduct another competition. (This is an advantage over other types of post Phase II funding).
- A Federal agency may enter into a Phase III agreement at any time with a Phase I or Phase II awardee.
- Phase III is the commercialization of innovative technologies, products, and services resulting from either a Phase I or Phase II contract. This includes further development of technologies for transition into NASA programs, other Government agencies, or the private sector.
- There is no limit on the number, duration, type, or dollar value of Phase III awards made to a business concern.
- There is no limit on the time that may elapse between a Phase I or Phase II and a Phase III award.
- For more information and to download the Phase III Contracting Handbook, see http://sbir.gsfc.nasa.gov/content/post-phase-ii-initiatives#Phase-III
- If you have a prospective NASA Phase III funding source, contact our SBIR Program Office for information on how to get it implemented.

(And why is this important?)

External Drivers in Creation of NASA's Space Technology Program

New NASA Technology framework, as of April 2013

Space Technology Mission Directorate

With successful formulation and implementation of Space Technology program, NASA officially separates Office of the Chief Technologist (OCT) into two organizations: OCT and Space Technology Mission Directorate (STMD).

Space Technology Mission Directorate

- Has direct management and budget authority of the Space Technology programs, which are performed by all 10 NASA Centers;
- Focuses on project execution and technology infusion into the Agency's exploration and science mission needs;
- Takes a customer driven approach, proving capabilities needed for future NASA missions and the national aerospace community; and
- Develops the Nation's innovation economy.

Office of the Chief Technologist

- Continues to serve as the Administrator's principal advisor and advocate on matters concerning Agency-wide technology policy and programs;
- Continues to lead NASA's technology transfer and commercialization efforts;
- Integrates, tracks, and coordinates all of NASA's technology investments; and
- Documents and communicates the societal impacts of the Agency's technology efforts.

Realignment will not affect the mission, content or budget authority of the Space Technology Programs.

How SBIR/STTR Fits Into STMD

 SBIR/STTR is a relatively large and high visibility program within the Space Technology Mission Directorate (STMD).

http://www.nasa.gov/directorates/spacetech/programs

- STMD is responsible for developing crosscutting and pioneering new technologies and capabilities which NASA needs for current and future missions.
 - NASA infusion opportunities that are crosscutting would be typically funded by higher TRL STMD programs, such as Game Changing Development (GCD), Small Spacecraft Technology, and Technology Demonstration Missions (TDM).
 - NASA infusion opportunities that are specific to a particular mission directorate (MD) would be typically funded by that MD.
- STMD uses merit-based competition to generate a technology portfolio which covers a range of discipline areas and technology readiness levels.

http://www.nasa.gov/directorates/spacetech/about_us/index.html

STMD Low TRL Programs

- SBIR/STTR: Opportunity for small, high tech companies and research institutions to participate in Government sponsored research and development (R&D) in key technology areas.
- NASA Innovative Advanced Concepts (NIAC): Nurtures visionary ideas that could transform future NASA missions with creation of breakthroughs—radically better or entirely new aerospace architectures, systems, or missions—engaging innovators and entrepreneurs as partners. NIAC projects study early, innovative, technically credible, advanced concepts. Intended scope is for TRL 1-2 or early 3.
- Center Innovation Fund: Stimulates and encourages creativity and innovation within the NASA Centers in addressing technology needs of NASA and the nation.
- Space Technology Research Grants: Accelerates development of "push" technologies to support future space science and exploration needs of NASA, other government agencies and commercial space sector. Innovative efforts with high risk and high payoff are encouraged. Composed of two competitively awarded components: Fellowships and Grants.
- Centennial Challenges: Initiated in 2005 to directly engage public in process of advanced technology development. Offers incentive prizes to generate revolutionary solutions to problems of interest to NASA and the nation. Seeks innovations from diverse and nontraditional sources. Competitors are not supported by government funding; awards are made to successful teams when the challenges are met.

STMD Mid TRL Programs: Game Changing Development (GCD)

- Seeks to identify and rapidly mature innovative/high impact capabilities and technologies, and to investigate novel ideas and approaches that have the potential to revolutionize future space missions.
- Advances space technologies that may lead to entirely new approaches for the Agency's future space missions and provide solutions to significant national needs.
- Focuses efforts in mid TRL range (from 3 to 5/6), generally taking technologies from proof of concept through component or breadboard testing in a relevant environment. Balanced approach of guided technology development efforts and competitively selected efforts from academia, industry, NASA, and other government agencies.
- The most promising ideas will be advanced through significant ground-based testing and
 or laboratory experimentation, typically by multiple performing teams using varied
 approaches. These teams are held accountable for ensuring that discoveries move
 rapidly from the laboratory to application.
- Portfolio will produce both subsystem and system level multidisciplinary innovations and component and discipline innovations. While advances in discipline and core knowledge are by-products, primary objective is to mature transformational innovations for system-level flight demonstration.

http://www.nasa.gov/directorates/spacetech/game_changing_development/about/index.html

STMD Mid/High TRL Programs: Small Spacecraft Technology

- Identifies and supports development of new subsystem technologies to enhance or expand capabilities of small spacecraft. sSeeks to develop subsystem technologies that are new and revolutionary, rather than incremental improvements of existing subsystems. Goal is to advance subsystem technologies from TRL 3 (analytical and experimental critical function and/or characteristic proof of concept) to TRL 5 (component and/ or breadboard validation in relevant environment).
- Supports flight demonstrations of new technologies, capabilities and applications for small spacecraft. Seeks to demonstrate technologies that are new, and capabilities not previously demonstrated in space. Goal is to advance technologies and capabilities from TRL 5 (component and/or breadboard validation in relevant environment) to TRL 7+ (system prototype demonstration in an operational environment).
- Uses small spacecraft as platforms for testing and demonstrating technologies and capabilities that might have more general applications in larger-scale spacecraft and systems. Seeks to contribute where demonstrations with small spacecraft can reduce cost, risk, complexity or time required to advance state-of-the-art.

http://www.nasa.gov/directorates/spacetech/small_spacecraft/smallsat_overview.html

- Bridges gap between scientific and engineering challenges and the technological innovations needed to overcome them, between laboratory development and demonstration in space.
- Focuses on crosscutting technologies with strong customer interest that meet needs of NASA and industry by enabling new missions or greatly enhancing existing ones. Chosen technologies will be thoroughly ground- and flighttested in relevant operating environments.
- TDM Project Portfolio (as of November 2015):
 - Composites for Exploration Upper Stage (CEUS)
 - Deep Space Atomic Clock (DSAC)
 - Evolvable Cryogenics (eCryo)
 - Green Propellant Infusion Mission (GPIM)
 - Laser Communications Relay Demonstration (LCRD)
 - Low-Density Supersonic Decelerators (LDSD)
 - Solar Electric Propulsion (SEP)

- Established in late 2010 to help fulfill strategic objective of transforming NASA missions and advancing U.S. spaceflight capabilities with innovative space technologies.
- Adoption of advanced technologies for space applications is limited by opportunities to demonstrate them in relevant operational environments. Flight Opportunities seeks to increase availability and affordability of space technology flight tests by employing commercial flight services and developmental partnerships.
- Through Flight Opportunities, STMD selects promising technologies from industry, academia and government, and tests them on commercial launch vehicles. This approach takes technologies from a laboratory environment and gives them flight heritage, while also feeding the development of U.S. commercial spaceflight technologies and infrastructure toward a viable and cost effective orbital and suborbital flight market.

Top-Level Objectives

- Facilitate maturation of technology payloads from TRL 4 to TRL 6 through flights that simulate relevant environments on parabolic, balloon, suborbital reusable launch vehicles (sRLV), and orbital platforms.
- Foster growth in emerging commercial suborbital and orbital platforms.

Crosscutting Space Technology DevelopmentPotential Post Phase II Funding Sources

- Candidate technologies should be applicable to:
 - More than one NASA Mission Directorate (MD), or
 - A NASA MD and an external Federal agency, or
 - A NASA MD and a commercial application.
- Technologies applicable exclusively to one NASA MD will probably not be considered unless truly revolutionary.
 - Instead seek follow-on funding from MD-specific sources (more on that later).
- Advancement from Early Stage Innovation programs into higher TRL programs is not automatic. One good option is for your company to get onto an appropriate team that is proposing to Game Changing Development, Small Spacecraft Technology, Technology Demonstration Missions or Flight Opportunities.
 - Company should use its NASA points of contact, both SBIR and non-SBIR; and learn as much as possible about STMD and its specific initiatives.

STMD Funding Opportunities

- Proposals to STMD funding calls must align with major drivers in NASA OCT's Space Technology Roadmaps.
- Recent STMD Solicitations are posted at http://www.nasa.gov/directorates/spacetech/solicitations
- STMD Solicitations are also posted on NSPIRES (NASA Solicitation and Proposal Integrated Review and Evaluation System). Home page:
 - http://nspires.nasaprs.com/external/
- Register with NSPIRES See "Getting Started" on the NSPIRES home page – to get on mailing lists for NASA research announcements and to submit proposals.
 - Individuals can register any time.
 - Organizations must have a valid registration with the System for Award Management. See NSPIRES home page for process.

NASA OCT Technology Roadmaps

- In 2010, NASA developed a set of 14 Technology Roadmaps, published in 2012, to guide the development of space technologies.
- The 2015 NASA Technology Roadmaps (now 15) expand and update the original 2012 roadmaps, providing extensive detail about anticipated NASA mission capabilities and associated technology development needs.
- The Roadmaps feed into OCT's Strategic Technology Investment Plan (STIP).
 - STIP provides strategy for developing technologies essential to the NASA mission and to National goals. It prioritizes the technology candidates within the roadmaps, and provides guidelines for technology investment.
 - The recommendations provided by the National Research Council (NRC) heavily influence NASA's technology prioritization.

http://www.nasa.gov/offices/oct/home/roadmaps/index.html http://www.nasa.gov/offices/oct/home/sstip.html

NASA OCT Technology Roadmaps - 2015

http://www.nasa.gov/offices/oct/home/roadmaps/index.html

NASA Strategic Space Technology Investment Plan (SSTIP)

- Created by NASA after development of the draft TA Roadmaps.
- Prioritizes space technologies essential to the NASA mission and achievement of national goals.
- Focused approach to guide NASA's space technology investment over next 4 years, within context of 20-year horizon.
 - 70% Core Investments must begin development ASAP.
 - 20% Adjacent Investments important but not indispensable.
 - 10% Complementary Investments limited immediate relevance.
- Publicly available at http://www.nasa.gov/offices/oct/home/sstip.html

What if a technology or application is mission-directorate specific (not crosscutting)?

What are some potential NASA Science Mission Directorate (SMD) post Phase II funding sources?

- Research Opportunities in Space and Earth Sciences (ROSES) NRA
 - Covers a range of post Phase II TRL levels.
 - Can also pursue ROSES in parallel with an ongoing Phase I or II.
 - See next two pages for detailed opportunities.
- NASA Pre-project and Project funding
 - Case-by-case basis. Tech Monitor's project and program office connections are especially important here.

How is the ROSES NRA relevant?

- This annual umbrella NASA Research Announcement (NRA) solicits basic and applied research in support of NASA SMD.
- Covers all aspects of basic and applied supporting research and technology in space and Earth sciences. Includes many individual program elements.
- Awards range from <\$100K/yr for focused, limited efforts (e.g., data analysis) to >\$1M/yr for extensive activities (e.g. development of science experiment hardware). Typical period of performance is 4 yrs.
- A program element may select anywhere from a few to several dozen proposals in a given year.
- Organizations of every type: Government and private, for profit and notfor-profit, may submit proposals without restriction on teaming arrangements.
- 2015 ROSES NRA, Solicitation NNH15ZDA001N, is available via NSPIRES.

http://nspires.nasaprs.com/external/

Proposals due (depending on specific element) through 4/30/2016.

What ROSES NRA elements are particularly applicable (in years in which they're competed)?

In rough order of increasing TRL:

- Astrophysics Research and Analysis (APRA)
- Advanced Component Technology (ACT)
- Advanced Information Systems Technology (AIST)
- Planetary Instrument Concepts for the Advancement of Solar System Observations (PICASSO)
- Maturation of Instruments for Solar System Exploration (MatISSE)
- Strategic Astrophysics Technology (SAT)
- Instrument Incubator Program (IIP)
- Planetary Science and Technology Through Analog Research (PSTAR)
- New Frontiers Homesteader
- Airborne Instrument Technology Transition (AITT)
- Heliophysics Technology and Instrument Development for Science
- In-Space Validation of Earth Science Technologies (InVEST)

What are some potential NASA Human Exploration and Operations Mission Directorate (HEOMD) post Phase II funding sources?

- HEOMD includes three major Research and Technology elements.
 - Advanced Exploration Systems (AES) pioneers new approaches for rapidly developing prototype systems, demonstrating key capabilities, and validating operational concepts for future human missions beyond Earth orbit. AES activities are uniquely related to crew safety and mission operations in deep space, and strongly coupled to future vehicle development.
 - Space Life and Physical Sciences Research and Applications (SLPSRA) oversees basic and mission driven scientific research in support of human space flight and crew health and safety, oversees basic and applied scientific research in life and physical sciences, and serves as Agency liaison with the International Space Station (ISS) National Laboratory management organization.
 - Human Research Program is dedicated to discovering the best methods and technologies to support safe, productive human space travel.

http://www.nasa.gov/directorates/heo/programs.html

HEOMD – AES Opportunities

- The Advanced Exploration Systems (AES) program consists of about 20 small projects that target high-priority capabilities needed for human exploration such as advanced life support, deep space habitation, crew mobility, and extra-vehicular activity (EVA) systems.
- Early integration and testing of prototype systems will reduce risk and improve affordability of exploration mission elements. The prototype systems developed in the AES program will be demonstrated in ground-based test beds, field tests, underwater tests, and flight experiments on ISS.
- In addition to developing building blocks for future missions, the AES program is exploring innovative ways to drive a rapid pace of progress, streamline project management, and use limited resources and the NASA workforce more effectively.
- AES development is focused in four main areas: Crew Systems,
 Vehicle Systems, Operations, and Robotic Precursor Activities.

http://www.nasa.gov/directorates/heo/aes/index.html

- NASA's Space Life and Physical Sciences Research and Applications Division (SLPSRA) executes high quality, high value research and application activities in Space Life Sciences (SLS), Physical Sciences (PS), Human Research, and Crew Health and Safety by mitigating risks to crews, and conducting research and developing technologies that will allow humans to travel safely and productively in space.
- SLPSRA Objectives:
 - Advance breakthroughs in discoveries in fundamental life and physical sciences that leverage unique events that take place in a space environment.
 - Ensure that ISS utilization has maximized support of high priority research and applications, reducing risks for long duration space exploration for humans
 - Ensure current and former crew health and medical data for crews are available for research and application purposes.

http://www.nasa.gov/directorates/heo/slpsra/index.html

HEOMD – HRP Opportunities

- The Human Research Program (HRP) developed as a result of NASA's refocus
 of the space program on exploration in early 2004.
- HRP includes many facets of human space travel such as: Environmental Factors, Exercise Physiology, Habitability, Human Factors, Medical Capabilities, Physiology, Psychosocial and Behavioral Health, and Space Radiation.
- HRP is comprised of six Elements: ISS Medical Project, Space Radiation, Human Health Countermeasures, Exploration Medical Capability, Behavioral Health & Performance, and Space Human Factors and Habitability.
- HRP uses research findings to develop procedures to lessen the effects of the space environment on human health and performance. Uses ground research facilities, the ISS, and analog environments to develop these procedures and to further research areas that are unique to the Moon or Mars.

http://www.nasa.gov/hrp/about

What are some potential NASA Aeronautics Research Mission Directorate (ARMD) post Phase II funding sources?

- ARMD uses NSPIRES-posted NRAs to solicit proposals for foundational research to enhance core capabilities.
- Current umbrella solicitation for ARMD Research Opportunities is ROA-2015 (Solicitation NNH15ZEA001N on NSPIRES website).
 Amendments will be posted to the NSPIRES page and announced at http://www.aeronautics.nasa.gov/nra.htm as they occur.
- All NRA technical work is defined and managed at NASA Centers by project teams within each of the four program areas (Airspace Systems, Aviation Safety, Fundamental Aeronautics, Aeronautics Test Programs). NRA awards originate from the centers.
- Participation is open to all categories of organizations, including educational institutions, industry and nonprofit organizations.

http://www.aeronautics.nasa.gov/nra.htm

What if I need details on specific SBIR companies and technologies that might fit my program or project's needs?

- Search the NASA SBIR Abstract Archives or Award Search http://sbir.nasa.gov/abstract_archives
 http://sbir.nasa.gov/advanced_search
- Search the NASA TechSource SBIR database
 https://ehb8.gsfc.nasa.gov/sbir/public/technologySearch/searchAction.do?requestFrom=NASASBIRHome
- Search the Small Business Administration (SBA)'s SBIR/STTR Award database
 - https://www.sbir.gov/sbirsearch/award/all
- Search the SBA Tech-Net database
 http://web.sba.gov/tech-net/docrootpages/index2.cfm

These are all user friendly and publicly accessible. You can either search on your own, or we can easily do a search for you (free!)

Can we leverage other agencies' resources?

- Yes We can leverage other agencies' tech infusion resources by:
 - Picking up connections at conferences where accomplishments of SBIR companies (particularly hand-picked ones) are highlighted: e.g. the SBIR National Conferences and the Navy Opportunity Forum.
 - NASA SBIR personnel usually attend these, and we can then distribute the latest technology and programmatic news to interested researchers and managers.
 - Staying aware of relevant SBIR technologies developed by other agencies (particularly DoD) that are also potentially applicable to NASA.
 - Involvement with other agencies' SBIR solicitations.
 - NASA personnel have the opportunity to see technologies which small companies are developing for these agencies. If they are also relevant to NASA applications and technology needs, we can then encourage these companies to respond to NASA's SBIR proposal solicitation, and can provide information on these capabilities to our personnel for follow-up.

Additional NASA MD Resources: Roadmaps, Program Plans, Working Groups, Missions, Decadal Surveys...

- Science (SMD)
 - Earth Science http://nasascience.nasa.gov/earth-science/
 - Planetary Science http://solarsystem.nasa.gov/
 - Astrophysics http://nasascience.nasa.gov/astrophysics/
 - Heliophysics http://nasascience.nasa.gov/heliophysics/
- Human Exploration and Operations (HEOMD)
 http://www.nasa.gov/directorates/heo/home/
- Space Technology Mission Directorate (STMD)
 http://www.nasa.gov/directorates/spacetech/home
- Aeronautics Research (ARMD)
 - http://www.aeronautics.nasa.gov/

Companies: Use these resources as a starting point – Always follow up with technical and/or programmatic points of contact.

How about some other commercialization and business development resources?

- National SBIR Conferences and Regional SBIR Conferences
 - Resources for small companies include:
 - One-on-one meetings with SBIR agencies and prime contractors
 - Array of presentations on methods, strategies, resources and contacts for maximizing SBIR technical, business development, commercialization, infusion, and funding success
 - Informational poster sessions
 - Many networking opportunities
 - Pre-conference short courses
 - Encourage your small business contacts to attend and participate.
 - Presentations from previous Conferences are openly posted on their websites, but not indefinitely. We can e-mail you copies if you're interested.
- SBIR Gateway is a broad scope SBIR information site. Includes news items, search services, conference information, assistance services and more.

SBIR 2015 Road Tour - Overview

The SBIR Road Tour is a national outreach effort to convey the non-dilutive technology funding opportunity provided through the Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs. The SBIR/STTR programs annually provide \$2.5 billion in funding to small advanced technology firms to spur new technological discoveries and facilitate the commercialization of innovations. Together they represent America's Largest Seed Fund.

Local innovation supporters in communities who have historically underutilized the opportunities provided through the SBIR/STTR programs have invited representatives of America's Largest Seed Fund to engage the small advanced technology community, including women and minority-owned research and development businesses. Every SBIR Road Tour stop represents a coveted opportunity to meet directly with Federal and State Program Managers who seed a wide spectrum of innovative ideas, while learning about your state sponsored innovation support infrastructure.

Presented by the Small Business Administration (SBA) with participation by all the Federal SBIR/STTR Agencies, including NASA.

Stay tuned for 2016.
